# The Green Hackathon — Judging Criteria

Think Globally, Build Locally · June 12–14, 2026

## 1 • Scalability

Weight: 25%

Can it sustain 10,000 users? (sustainability + security)

|   |                                                                          |
|---|--------------------------------------------------------------------------|
| 5 | Built to hold 10k now — secure, durable, infrastructure thought through. |
| 3 | Could reach hundreds with effort; basic security considered.             |
| 1 | Breaks past a handful of users. No thought to load, data, or security.   |

## 2 • Universality

Weight: 25%

Does it transfer worldwide?

|   |                                                                                 |
|---|---------------------------------------------------------------------------------|
| 5 | Works as well in Hong Kong as in Rio, New York, or Bangladesh — out of the box. |
| 3 | Transferable, but needs significant adaptation per region.                      |
| 1 | Locked to one place, language, or context. Won't travel.                        |

## 3 • User-Friendly

Weight: 25%

Can anyone, any age, use it with ease?

|   |                                                                      |
|---|----------------------------------------------------------------------|
| 5 | Anyone, any age, uses it effortlessly. Sovereignty has no age limit. |
| 3 | An average user gets through it, with some friction.                 |
| 1 | Needs technical skill; confusing even to builders.                   |

## 4 • Equitable

Weight: 25%

Does it inform optimism — serve users reciprocally, not extractively?

|   |                                                                       |
|---|-----------------------------------------------------------------------|
| 5 | Genuinely informs optimism — empowering, reciprocal, anti-extractive. |
| 3 | Fair exchange; neutral on user empowerment.                           |
| 1 | Purely extractive — harvests data or value, gives little back.        |

**Tiebreak order:** when totals are close, the build with the highest **Equitable** score wins first, then highest **Scalability**, then **People's Choice** reaction count. The most human, least

extractive idea takes it.

**The panel:** ⚖️ Aiman Naqvi, AI Safety Advocate (@nuancedaiman) · Kristy Drutman, Founder of Green Jobs Board (@browngirl\_green) · Christopher Tavalazzi, "Coffee Jesus," Founder of Johnny Autoseed (@thecoffeejesus)
